Business Insights

1. Property size is a major price driver, with an area-price correlation of 0.86.
2. Noida has the highest listing volume with 150 properties, indicating strong market liquidity.
3. Delhi records the highest average property price at approximately ₹673,377.
4. Villa properties have the highest average price at approximately ₹706,504.
5. Apartment provides the lowest average price per square foot at approximately ₹262.79.
6. Villa has the highest average price per square foot at approximately ₹315.79.
7. There are 17 luxury properties, representing approximately 1.6% of the dataset.
8. Area and price per square foot have a correlation of -0.56, suggesting that larger properties tend to have lower price per square foot.

Final Recommendations

1. Focus on high-demand markets

Noida has the highest listing volume and should be considered an important market for inventory and transaction activity.

2. Consider premium city markets

Delhi commands the highest average property price, making it relevant for premium residential positioning.

3. Evaluate properties using price per square foot

Price per square foot provides a useful comparison between properties with different sizes and can help identify relatively better-value opportunities.

4. Use property size as a major pricing factor

The strong positive correlation between area and price indicates that property size should be an important variable in pricing and valuation models.

5. Track luxury inventory separately

Luxury properties represent a small portion of the overall market and should be analyzed as a distinct premium segment.
